Managed Services Provider

## Managed Data Protection from Resolutions MSP.

### YOUR Benefits:

- **Recurring Revenue Base**
- **Industry-Leading Technology**
- **Customised Reseller Portal**
- **Sales and Marketing Collateral Provided**
- **Tier One Support**

### CUSTOMER Benefits

- **Simple, Safe and Secure**
- **Unlimited Versions and Powerful Recovery**
- **Saves Every Back Up Archive**
- **Global Roaming File Access**
- **Access Files from Mobile Devices**
- **Unlimited Computers**
- **No License Fee**

### Access Your Files on the Web

Backed up data can be accessed from any browser, because data is being backed up to our cloud. Your customers can access data anywhere in the world by simply going online, so they will never be without a critical file again.

### Backup Unlimited PCs Online

Customers can back up as many computers as they need, using one account, so no juggling of multiple accounts, making all the PCs in any business easier to manage. This is also the most affordable way to back up all business data as we do not charge a separate amount for each PC.

### Share Your Files

Any of the files that users have backed up can be easily shared - all they need is an email address. A large attachment will never bounce again; users can select as many files as they'd like to share with friends and colleagues; and users can share photos or videos with ease.

### Continuous Data Protection

Our detection feature means data is backed up instantly when data is modified on any of the PCs on your customer's account. When your customer needs to access the file, whether it be from another computer or share it with a colleague, the latest version is always available.

### Auto-Detect Which Files to Back up

With our File Select feature, your customers can specify what type of files to back up. They can select picture files, movie files, document files, or anything else. File Select makes sure the right data is protected in the simplest way possible.

# Resolutions

Managed Services Provider

**RESOLUTIONS** provides the entire infrastructure necessary to power your cloud backup service via our global partner datacentre grid, with 10 datacentre around the world in the USA, Asia and Europe.

### Back Up on iPhone and BlackBerry

Users can access all of their files anytime, anywhere from their mobile devices. Our iPhone and BlackBerry features keep their important files accessible when they need them.

### Back Up Files to a Local Drive

With our local backup system, you can backup your important files securely to an external USB drive, a local network location, a USB stick, an iPod or any other local medium, with with encryption for additional protection.

### Schedule Online Back Up

Users have the flexibility to schedule monthly, weekly, daily or hourly back up, and they also have the ability to perform an instant back up. Instead of running constantly, taking up valuable CPU and RAM resources like other online backup systems, our solution runs when users schedule it, keeping their PC resources safe and optimising their PC performance.

### Enterprise Strength Online Back Up

Our compression system only backs up the files users change, which means that only changed 1's and 0's are transferred. On a 500 MB database (MYOB/Intuit/Turbo Tax), the daily transfer can be as small as 5 KB. Also our transfer system is enterprise grade, which means that large file transfers are resumed at the KB of interruption and does not start at the beginning like most online backup systems.

### Physical Media Upload

If your customers have over 50GB of data to back up, the initial back up session can take days - even with a fast internet connection. However, our exclusive PMU technology lets them "seed" their backup by sending them encrypted data on an external hard disk. Alternatively, we can send a hard disk overnight and they can copy backups to a disk. After that, just the files users change will be transferred, meaning their daily backup takes just minutes

### Enhanced Security

Our system ensures complete privacy protection, using a three-tiered encryption system that encrypts data on the user's computer, in transit and finally when at rest in storage. Users can also opt to use our UltraSafe™ feature, an encryption process that protects their data stored on the server, even from our engineers as only the user who put it there can ever access the data. Unlike other online backup companies, where data is neither encrypted, nor stored as encrypted data, we can prevent even employees of the company from accessing stored data.

### Store Unlimited Versions

Users can keep an unlimited version history of all their files - roll back their books to last year's tax records if they wish. Use our time machine feature to go back to the date they want to restore their back up and recover that snapshot of files and versions.

### Powerful Recovery

We keep an unlimited version history of all user files, allowing them to roll back to any version of any of their files. They can use our time machine feature to go back to the date they want to restore and recover that snapshot of files and versions.
