

# Resolutions

Managed Services Provider

## Managed Data Protection Top Ten Benefits.

- 1 Unlimited license:** Back up as many computers as required using just one account - laptop, business network, including servers. Only the total amount of data is assessed in the account size.
- 2 Unlimited version history:** ResolutionsMSP keeps every version of every protected file forever, unless the account user decides it should be deleted. Last year's financial data to last week's meeting minutes - all immediately recoverable.
- 3 Unlimited local back up client at no extra charge:** For no additional charge, ResolutionsMSP's system includes a local back up module that is not limited to any data capacity. Using the same interface, the user has an online back up profile plus any number of local back up profiles, each with different back up sets and rules. Plus no additional software to procure, deploy or learn.
- 4 Physical media upload:** On completion of a site survey, our technology gives you several options to ensure your initial data back up is done quickly and safely. Your service provider can physically back up your data on site on to a hard disk and transport your encrypted data to the data centre for uploading. Alternatively, you can back up via the Internet in stages - your data is compressed and encrypted by us.
- 5 Unlimited file sharing facility:** Share and access data at any time, from any place, to any place, with any number of people. The ResolutionsMSP system supports sharing single files or whole folders without email account limitations.
- 6 Unlimited file recovery operations:** Back up is only worthy of the name if it's recoverable. With ResolutionsMSP you can test a backed up file's integrity every day, if you wish. You can even run synchronous recoveries to different systems.
- 7 Continuous data protection:** Our detection feature means data is backed up instantly when data is modified on any of the PCs on your account. When you need to access the file, whether it be from another computer or share it with a colleague, the latest version is always available.
- 8 Unlimited browser-only access anywhere in the world:** Every protected file can be downloaded using a simple browser. Whether you are visiting another office or stuck in an Internet café, your files are at your fingertips.
- 9 Unlimited filtering facility for filename inclusion/exclusive in your folder selections:** Select whole folders and ResolutionsMSP's cloaking ensures your account space is not wasted on the wrong file types. A "My Documents" folder could have thousands of music files in it, but ResolutionsMSP's cloaking (to 'include only' or 'exclude all') ensures your account space is put to its best use.
- 10 Best in class security:** End-to-end encryption and compression ensures that only you can recover your data; only you can see your protected files; and only you can access and open them. With triple layer encryption, best-in-class binary delta compression and secure transmission, your data is safe 'off site'.
